Draft Supplemental Field Investigation

Work Plan Addendum

Operable Unit No. 16, Site 89

Dear Mr. Stevens:

The Environmental Protection Agency (EPA) has completed its review of the above subject document. Comments are listed below.

1. Verify that the methanol preservation method is being used for the DNAPL samples.
2. It is not clear from the figure, where the groundwater samples will be collected. Please verify the locations.
3. Groundwater samples should be collected from the opposite side of the creek in the area of the proposed treatability study. We need to have a handle of the dissolved phase before the study begins.

If there are any questions, I can be reached at (404) 562-8538.

Sincerely,

A handwritten signature in dark ink, appearing to read "Gena D. Townsend".

Gena D. Townsend
Senior Project Manager
